

More Great Products From... **ACS** **ACS Home & Hearth Cleaner™**

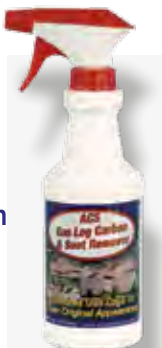

ACS Home & Hearth Cleaner safely removes carbon, soot & grease without using Sodium Hydroxide – (lye), an active ingredient found in most hearth and stove cleaners. It's also commonly used in many oven cleaners, paint strippers, and drain cleaners.

ACS Home & Hearth Cleaner combines the cleaning power of citrus oil, biodegradable detergents, and a unique buffered active ingredient made from sand and soda ash, which is recognized as a non-pollutant. Home & Hearth Cleaner is less corrosive and more user friendly than many other hearth cleaners.

ACS Gas Log Carbon & Soot Remover™

ACS Gas Log Carbon & Soot Remover removes unsightly carbon and soot accumulation from gas logs. Just spray a light mist of Gas Log Carbon & Soot Remover on the logs while they are hot. It's the fastest and easiest way known to clean gas logs!

ANTI-CREO-SOOT

If you burn wood you may have a hidden fire hazard in your chimney – CREOSOTE! Creosote is a black, tar-like substance caused by condensation of gases in smoke. In time it builds up, and under the right conditions, it can ignite into a dangerous chimney fire. Glazed creosote is the worst type because it is almost impossible to remove with conventional cleaning methods.

Your soot and smoke stained fireplace glass, hearth, stove, brick and stone can look new again with these ACS Brand of creosote, smoke, and grease removing products. All products are available from ACS® dealers throughout the United States.

ACS — A Major Breakthrough In Heating Safety

ACS Liquid™

ACS Anti-Creo-Soot Liquid is a non-toxic and environmentally safe liquid manganese catalyst that attacks and destroys dangerous creosote and soot. It is safe for use in all wood, coal and pellet burning appliances including those with catalytic combustors.

ACS Powder™

ACS Powder is an environmentally safe blend of ingredients that effectively neutralize, dry and break down dangerous creosote and soot deposits. Apply the powder up the chimney in between fires to help modify stubborn creosote deposits to a more brittle state that can be removed by chimney sweeping.

For Fastest Results...

**Use ACS Powder
Between Fires**

**And Liquid ACS
While Burning**

Make Your Chimney Safer With... **ANTI-CREO-SOOT**

Use ACS regularly to control creosote accumulation and reduce pollution. Start early in the heating season to “condition” stoves and furnaces for efficiency. Use liberally at the end of the heating season, before shutting down stove or furnace etc. to reduce “off season” odors and chimney corrosion.

Safe For Use With: Wood, Coal & Pellet Burning Appliances, As Well As Gas Logs

Wood: Regular use of ACS converts hazardous creosote to a harmless ash or char. It helps to reduce further deposits, making the appliance safer to operate and more efficient.

Coal: Soot from low grade or improperly burned coal is a serious pollutant. ACS can significantly reduce soot and, therefore, emissions from coal stoves.

Pellet Stoves: ACS reduces accumulations of excess ash from wood-based pellets, and helps prevent clogging of the pellet feed mechanism.

Gas Logs: ACS disperses unsightly carbon build-up on gas logs and helps prevent future accumulation. The result is cleaner burning logs and a more realistic fire.

A severe glazed creosote condition in a clay flue liner.

A clay liner during treatment with ACS. (Creosote is being converted.)
